

### IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended)      A lead comprising:  
a lead body extending from a proximal end to a distal end; and  
~~an~~ a ring electrode coupled to the lead body;  
wherein the lead body and the ring electrode each have an outer surface adapted to passively prevent formation of clots on the outer surfaces, wherein the outer surface of the lead body is adapted such that a ~~pseudo-intimal~~ layer of blood cells is formed on the outer surface when exposed to a bloodstream, and wherein the outer surface of the ring electrode includes a textured coating including titanium microspheres.
2. (Withdrawn)      The lead of claim 1, wherein the outer surface of the lead is textured so as to form a pseudo-intimal layer on the outer surface.
3. (Withdrawn)      The lead of claim 1, wherein the lead body includes at least a portion seeded with endothelial cells or stem cells.
4. (Withdrawn)      The lead of claim 1, wherein the lead body material includes a phospholipid polymer.
5. (Previously Presented)      The lead of claim 1, wherein the titanium microspheres have a diameter of between 75-100  $\mu\text{m}$ .
6. (Cancelled)
7. (Currently Amended)      The lead of claim 1, wherein the titanium microspheres are dimensioned to attract circulating blood cells so as to develop a uniform and tightly adherent ~~biologic surface~~ blood cell layer.

8. (Withdrawn) The lead of claim 1, wherein the lead body includes an amino acid sequence attached to a polymer, the amino acid sequence chosen to bind to cell receptors.
9. (Original) The lead of claim 1, wherein the outer surface of the lead does not include any active coatings which elute from the surface to minimize clotting.
10. (Previously Presented) The lead of claim 1, wherein the lead is adapted to be coupled to a pulse generator and is adapted for delivering cardiac resynchronization therapy.
11. (Currently Amended) A lead comprising:  
a lead body extending from a proximal end to a distal end; and  
~~an~~ a ring electrode coupled to the lead body;  
wherein the lead body has a textured outer surface adapted to form a ~~pseudo-intimal~~ layer of blood cells on the outer surface when exposed to a bloodstream so as to passively prevent formation of clots on the outer surface; and  
wherein the ring electrode includes an outer textured surface including titanium microspheres.
12. (Original) The lead of claim 11, wherein the electrode outer surface is adapted to trap blood cells within the textured surface to form a layer of blood cells on the electrode surface.
13. (Previously Presented) The lead of claim 11, wherein the titanium microspheres have a diameter of between 75-100  $\mu\text{m}$ .
14. (Original) The lead of claim 11, wherein the outer surface of the lead does not include any active coatings which elute from the surface to minimize clotting.
15. (Previously Presented) The lead of claim 11, wherein the titanium microspheres are dimensioned to attract circulating blood cells so as to develop a uniform and tightly adherent biologic surface.

16. (Previously Presented) The lead of claim 11, wherein the lead is adapted to be coupled to a pulse generator and is adapted for delivering cardiac resynchronization therapy.

17. (Currently Amended) A lead comprising:  
a lead body extending from a proximal end to a distal end;  
~~an~~ a ring electrode coupled to the lead body; and  
means for passively preventing formation of clots on the ring electrode and the lead body,  
wherein means for passively preventing clots on the ring electrode includes a titanium  
microsphere outer surface coating on at least a portion of the ring electrode, and wherein means  
for passively preventing clots on the lead body includes forming the lead body such that a  
~~pseudo-intimal~~ layer of blood cells is formed on an outer surface of the lead body when exposed  
to a bloodstream.

18. (Previously Presented) The lead of claim 17, wherein the titanium microspheres are  
dimensioned to attract circulating blood cells so as to develop a uniform and tightly adherent  
biologic surface.

19. (Withdrawn) The lead of claim 17, wherein means for passively preventing includes at  
least a portion of the lead body having an outer surface seeded with endothelial cells or stem  
cells.

20. (Withdrawn) The lead of claim 17, wherein means for passively preventing includes the  
lead body having an outer surface including a phospholipid polymer material.

21-24. (Cancelled)
